

ScreenTime Insights Dashboard

1. Goal

- The dashboard will show how kids spend their screen time, which devices they use, and what health problems they have.
- It's for parents, teachers, policymakers, and mentors.
- The goal is to make insights easy to understand and useful

2. Story Flow

- **Who are the kids?** → Look at their ages, gender, and whether they live in cities or villages.
- **How much time do they spend on screens?** → Show average daily hours and how many go over safe limits.
- **Which devices do they use?** → Compare phones, laptops, tablets, and TVs. Show portable vs non-portable differences.
- **What are they doing on screens?** → Check the balance between educational and recreational activities.
- **What health problems do they face?** → Show issues like poor sleep, eye strain, anxiety, or obesity linked to devices.
- **What can we do about it?** → Give recommendations for parents, teachers, and policymakers.

3. Layout & Sections

Top row (KPI cards):

- Average daily screen time
- % of kids exceeding limits
- Total daily screen hours

Filters / Slicers (left panel):

- Age group
- Gender
- Urban or rural

- Device type (portable vs non-portable)

Main charts / visuals:

- **Age Distribution:** Bar chart of kids by age, highlight largest groups.
- **Device Usage:** Donut or bar chart showing top devices.
- **Portable vs Non-Portable Devices:** Stacked column chart.
- **Screen Time by Age & Gender:** Line or scatter plot.
- **Educational vs Recreational:** Stacked bar chart.
- **Health Impacts by Device:** Stacked bar chart or heatmap.
- **Urban vs Rural Device Use:** Horizontal bar chart comparing locations.

Bottom:

- Key takeaways and recommendations.

4. Interactivity & Insights

- Selecting an age group updates charts for device use and health impacts.
- Highlight high-risk kids, like early teens on phones exceeding limits.
- Make it easy for parents and teachers to understand without technical knowledge
